Do I need a surge protector?

Households experience power surges or power fluxes on a daily basis whether it be caused from everyday household appliances kicking on/off or because of weather. Over time, these power surges can damage electronic devices. Wireless Routers and Modems are some of the first things to be affected. Plugging your router or modem into a surge protector will help protect them. Having your electronics & appliances plugged into surge protectors could save you from having to replace them because of a little power surge.
